

## **Organization Profile Form** **April 1<sup>st</sup>, 2017**

Organization name: **Mimir Networks**

Kind of organization: Company

**CYBER SECURITY / Forensic analytics**  
**Network Visibility, Anomaly Detection and Event Mitigation**

---

At one tenth the cost of leading competitors, Mimir Networks is providing cyber security tools to address the issue of constantly evolving attacks. Mimir provides an experienced trusted security adviser, in the form of intelligence tools, to augment knowledge of IT staff and allow them to proactively protect their networks. We have also developed the world's first Petabyte+ distributed network forensics platform that can be distributed across a campus or housed in a single data center.

Mimir provides protection for large enterprise, Internet Service Providers (ISP), data centers and small to medium size business. We do this with a combination of Software as a Service (SaaS), Infrastructure as a Service (IaaS) and/or on-premise appliance.

A Canadian company, Mimir was founded by network security professionals who spent over 25 years building and protecting some of the world's largest networks.

---

### **Products and Services**

A single source Forensic, Audit and Compliance tool for enterprise and government PacketMonster provides "single source of truth" for network traffic with the first Petabyte+ distributed network forensics platform.

PacketMonster leverages commodity hardware, along our proprietary algorithms, for data storage while maintaining a carrier class network design. PacketMonster is the world's first Petabyte+ distributed network forensics platform that can be distributed across a campus or housed in a single data center, depending on the requirements of client's network. This versatility provides the ability to replay and investigate all data to identify if the attack was initiated by a 0 day or another attack vector.

The user interface of the system is designed for single window management, providing data views as granular as the smallest branch node to as high as the largest data centers. The addition of each unit of

storage adds not only the ability to store data at higher rates and longer periods of time, but increases the search speed of the system. This methodology, along with Mimir's algorithms, allows for stability of the system and avoids the pitfalls of complex SQL queries which can cause time outs when searching terrabytes of data.

The second product was developed to address the Data Center, Service Provider and Enterprise markets. By using Mimir's novel algorithms we can help you identify anomalies and attacks in your network traffic, not only in and out of your network or private cloud, but on an east-west basis as well, inside your network. One issues are identified Mimir provides a one click solution to event mitigation.

**Core Competencies:**

Expertise in large scale (global) network architecture and security. Mimir technologies leverages commercially off the shelf hardware and SDN technology to create robust security system that can be managed by general IT staff without the need for senior level engineers or security analysts for systems management.

**Current foreign representation: No**

- Company subsidiary, joint venture or affiliated company (identify)
- Distributor or agent (identify)
- Licensing arrangements (identify)
- Other (explain)

**Relationships: Mimir** is seeking the following:

- X System Integrators partners
- X Value Added Resellers
- X Internet Service providers
- X Investment in the company
- To invest in other companies
- X Licensing opportunities (in or out)
- Other (explain)

**Meeting interest: Mimir** would like to meet with the following:

- X Meet with companies for collaborations, projects and synergies
- X Meet with military, government
- Meet with universities and research centers
- Other (explain)

**Primary contact information:**

Name: Mr. Jim Deleskie, Founder and CTO

E-Mail: [deleskie@mimirnetworks.com](mailto:deleskie@mimirnetworks.com)

Mr. Jim Deleskie, Founder and CTO

**Company office address:**

1 Douglas Street

Sidney, NS  
Canada B1P 1V2
